

GitHub Actions Jobs Explanation

This document describes the GitHub Actions workflows defined in this repository and explains the steps executed by each job.

1. Playwright Tests

Workflow file: `.github/workflows/playwright.yml`

Job name: test

Triggers: push and pull_request to main or master branches.

Job details:

- runs-on: ubuntu-latest
- timeout-minutes: 60

Steps:

1. Checkout repository: uses actions/checkout@v4 to clone the code.
2. Set up Node.js: uses actions/setup-node@v4 with node-version: lts/*.
3. Install dependencies: runs npm ci.
4. Install Playwright - Chromium: npx playwright install chromium --with-deps; timeout 15 minutes.
5. Install Playwright - Firefox: npx playwright install firefox --with-deps; timeout 25 minutes.
6. Install Playwright - WebKit: npx playwright install webkit --with-deps; timeout 25 minutes.
7. Run Playwright tests: npx playwright test --retries=2.
8. Upload artifact: uses actions/upload-artifact@v4 to save playwright-report/ with always().

2. CodeQL

Workflow file: `.github/workflows/codeql.yml`

Job name: analyze

Triggers: push and pull_request to main or master, plus weekly schedule.

Job details:

- runs-on: ubuntu-latest

Steps:

1. Checkout repository: actions/checkout@v4.
2. Set up Node.js: actions/setup-node@v4 with node-version: lts/*.
3. Initialize CodeQL: github/codeql-action/init@v3 with languages: javascript.
4. Install dependencies: npm ci.
5. Run CodeQL analysis: github/codeql-action/analyze@v3.

3. GitHub Actions UI and Code Scanning Results

In GitHub UI you may see Playwright Tests, CodeQL, and Code scanning results.

The third item is a summary panel, not a separate repository workflow job.

Repository source defines two jobs: test and analyze.
